Notes on Military Science and the Art of War

By Joseph Mark Califf

Theclassics.us, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1891 edition. Excerpt: .appearance it is a loose, soft, readily-moulded substance of buff color. It freezes at 40 degrees F. In the second class of dynamites, and all the other nitro-glycerine mixtures, the absorbent is itself an explosive, as the nitrates of potassium and sodium, resin, wood fibre, etc. Under this class comes the most powerful, and, it is believed, the best of all the high explosives--blasting gelatine, or gun-dynamite. Blasting Gelatine is made by dissolving in 92 parts of nitro-glycerine, 8 parts of collodion guncotton. The mixture gelatinizes into a solid state. In appearance it is a gelatinous, elastic, pale yellow substance, with a specific gravity of 1.6. It can be cut with a knife, rolled into strips and formed into any required shape. It is not affected by water, and does not require any particular care in its handling or transportation. Explosive gelatine differs from...

Reviews

Very beneficial for all type of folks. It can be rally intriguing throug studying time. You will like how the writer publish this ebook.

-- **Nathan Cruickshank**

Totally one of the better pdf I have at any time read through. It really is simplified but shocks within the 50 % from the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.
