RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 42 pages. Original publisher: Cleveland, Ohio : NASA Lewis Research Center ; Springfield, Va. : For sale by the National Technical Information Service, 1989 OCLC Number: ocm22684846 Subject: Fluid mechanics. Excerpt: . . . where x and y are spatial coordinates, and v are Cartesian velocities, ρ is the density, μ is the effective viscosity, μ_m is the molecular viscosity, μ_t is the turbulent viscosity, and eqs. (8-10) follow from the conservation of mass, u-momentum, and v-momentum, respectively. numerical calculation of incompressible flows, the conservation of mass equation is replaced by a pressure correction equation given as: $\rho^{n+1} = \rho^n - \frac{1}{\Delta t} \frac{\Delta p}{\rho^n} + \nabla \cdot (\mathbf{u} \Delta t)$ where the superscript denotes the current values, and A , $() A$, coefficients relating the incremental velocities and the incremental pressure and the last term represents the mass imbalance. A similar pressure correction equation for both incompressible and compressible flows and its derivation can be found in Kim (1989a). the present numerical method, the velocities are located at the same grid points and the pressure is located at the centroid of the cell formed by the four adjacent velocity grid points. Any other flow variables such as the turbulent kinetic energy and the dissipation rate are located at the velocity grid points. The control volume for the pressure correction equation is defined as the cell enclosed by the four neighboring grid points. The velocity-pressure decoupling is eliminated by treating the pressure correction equation as a continuous form partial differential equation (hereafter, abbreviated as p. d. e.) rather than treating it as a constraint 14 This item ships from La Vergne,TN. Paperback.
